

Influenza B virus (strain B/Florida/07/04)

Product Summary

Source:

Allantoic fluid of 10 days old embryonated eggs, inoculated with influenza B virus, strain B/Florida/07/04.

Applications:

Serological studies of influenza B virus, immunogen for antibody production.

Analysis:

Purity > 90 %

Purification:

Ultracentrifugation with 10 – 40 % sucrose gradient.

Presentation:

STE, 0.09 % sodium azide (NaN₃) and 0.005 % thimerosal.

Inactivation:

Thimerosal and beta propiolactone treatment.

This product has been treated in a manner consistent with methods of inactivation. Generally accepted good laboratory practices appropriate to microbiological/viral safe handling practices and techniques are required at work.

Storage Conditions:

-20 °C (between -15 and -30 °C allowed)

Material safety note:

This product is sold for research use only. Standard Laboratory Practices should be followed when handling this material.

Product contains sodium azide as a preservative. Although the amount of sodium azide is very small appropriate care must be taken when handling this product.
